THIS IS UNEVALUATED INFORMATION

25X1

1. An all weather road (#924) ran from Bardejov southward to Kosice via Klusov, Presov and Vajkovec. The road is classed as a highway and is over three lanes wide. It is constructed for heavy usage.
2. The roadbed consists of natural rock and clay. The top layer of the road is macadam surfaced, however, in some sections it is asphalt covered. The road is well maintained and heavy traffic runs on it. This road runs through a valley with woodlands along both sides. As of September 1958, the road was being widened and the road which runs from Bardejov to Kosice was to be asphalt covered.
3. The road is crowned for easy drainage and shallow drainage ditches run along both sides. A shoulder, gravel surfaced, runs along both sides of the road. It was used for emergency parking.
4. It is possible for tanks of 50-60 tons to travel on this road. This includes Skoda diesel trucks.
5. A concrete-steel bridge capable of absorbing heavy usage is located at Slav-Raslovice. This bridge is over three lanes wide and is in good condition. Another concrete-steel bridge is located south of Haniska. It crosses the Torysa river which flows north and south. This bridge is also in good condition and is capable of absorbing heavy usage. It is over three lanes wide.

Problem: A pea plant with round, yellow seeds (RRYY) is crossed with a pea plant with wrinkled, green seeds (rryy). What are the possible genotypes and phenotypes of the offspring?

Punnett Square:

	RY	RY
ry	RrYy	RrYy
ry	RrYy	RrYy

Solution:

The possible genotypes of the offspring are RrYy, RrYy, RrYy, and RrYy. The possible phenotypes of the offspring are round, yellow seeds.

Summary:

The possible genotypes of the offspring are RrYy, RrYy, RrYy, and RrYy. The possible phenotypes of the offspring are round, yellow seeds.
